Platform-native applications designed from the ground up for non-tech savvy users, so that they can easily adapt with the least learning curve

Engage with your audience with real time updates

Send visuals and information instantly to your head office

The best alternative for

FTP upload

General ftp clients requires user credentials to be shared and tracking of incoming media is cumbersome

WhatsApp

Media sent using WhatsApp suffers from quality loss and the sender cannot be identified or verified

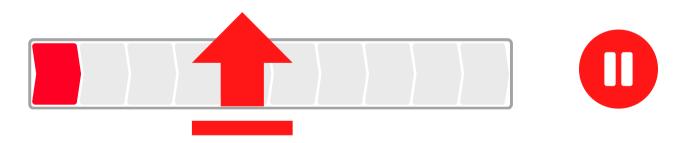

Email and

more

Lack of properly structured metadata and distribution across the organisation

Resumable file upload protocol

Upload can be interrupted at any moment and can be resumed without re-uploading the previous data again. An interruption may happen willingly if the user wants to pause, or by accident in case of a network issue or server outage.

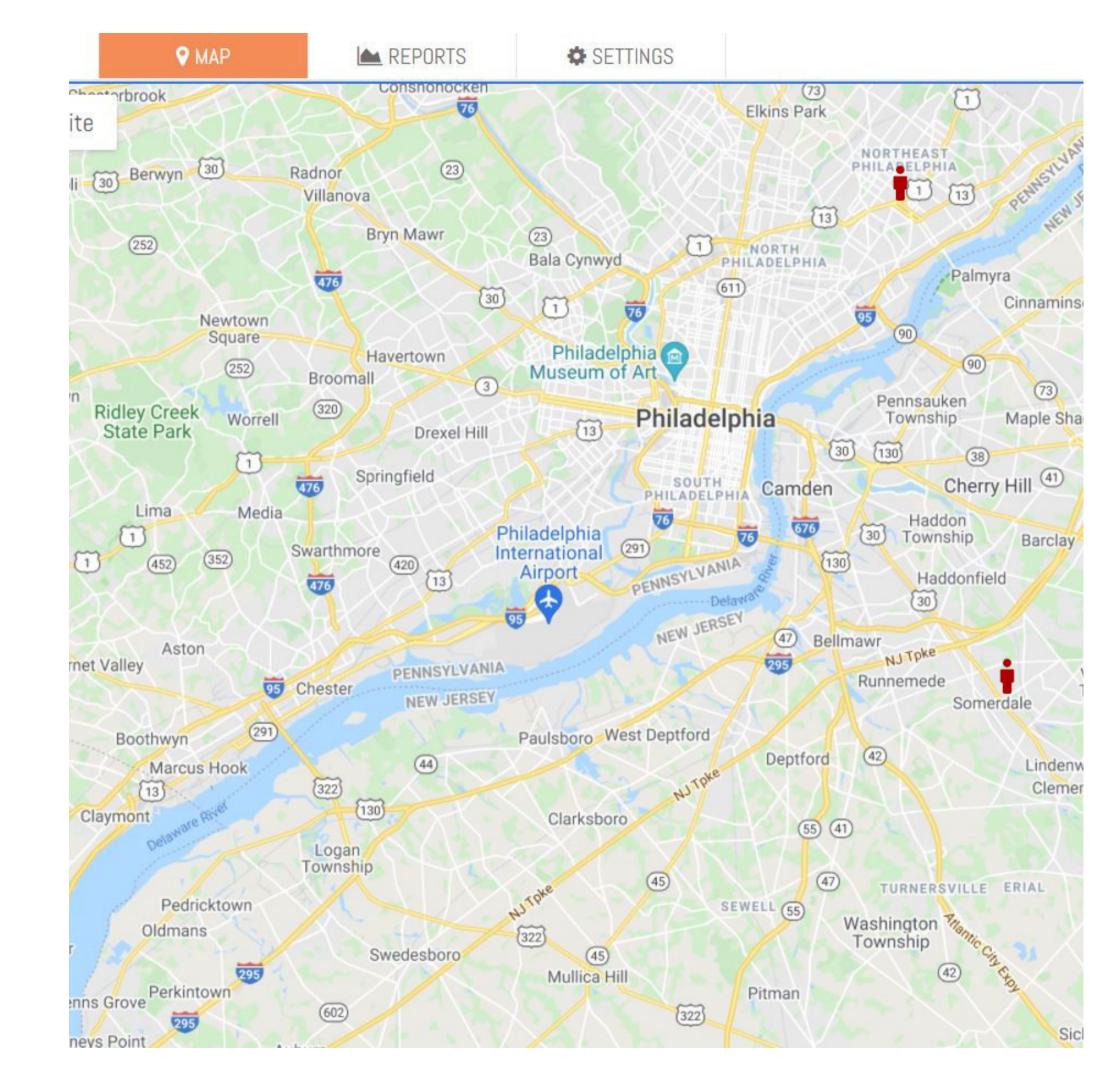

DDD

Locate users

in real-time

With integrated google maps view locate nearby reporters and assign them to cover important stories.

Features that matter

Deploy on cloud or on-prem

Scalable architecture

Linux based for sock solid stability

Send messages to users via notifications

Privilege based access

Send voice instructions along with media

Integrated with asset management & NRCS Systems

Comprehensive reports and audit log

Checksum based file verification for 100% confidence

Track media usage throughout the workflow
